

TOPIC 3 Working with Browsers:

To work with chrome browser, we need to run chrome driver server executable file to control the google chrome and we have to create object for the ChromeDriver () class.

Step 1:

Download chromedriver.exe file (i.e. chrome driver server)

<http://chromedriver.chromium.org/downloads>

Step 2:

Specify chrome driver.exe file path in the script.

Syntax:

System.setProperty("webdriver.chrome.driver","Path of the executable file");

Step 3:

Create object for ChromeDriver() class.

Syntax:

```
ChromeDriver obj=new ChromeDriver();
```
